Dark Moon Apollo And The

This year marks the 50th anniversary of that remarkable feat of technology and daring. And while the moonwalkers, Neil Armstrong and Buzz Aldrin, dominate ou...

Apollo 11's 'third astronaut' reveals secrets from dark side of the ...

In October of 1959, the Luna 3 spacecraft launched from the Baikonur Cosmodrome in Kazakhstan. Luna 3 was the third spacecraft to reach the Moon and the first to send back pictures of the Moon's far side. The pictures were noisy and indistinct, but because the Moon always presents the same face to the Earth, they offered views of a part of the Moon that had never been seen before.

Officially, the Apollo 17 mission was the last to leave the Earth and venture out to the Moon. Apollo 18 and 19 were cancelled due to budget cuts – at least officially. Many would point out that those missions were already technically paid for. And some would even insist that they went ahead secretly, away from the eyes of the world. When claims of “missing moon rocks” began to ...

The Truth Behind Apollo 18 and the Missing Moon Rocks

First launched to overwhelming acclaim in 2013, the OMEGA Speedmaster “Dark Side of the Moon” series remains coveted, cherished, and highly sought-after by fans of the Swiss brand. The collection represents the most famous chronograph in the world, updated with serious innovation and ceramic craftsmanship.

Dark Side Of The Moon Watches - Speedmaster | OMEGA®

From 1969 through 1972, Apollo astronauts installed several seismographic measuring systems on the Moon and their data made available to scientists (such as those from the Apollo Lunar Surface Experiments Package).The Apollo 11 instrument functioned through August of the landing year. The instruments placed by the Apollo 12, 14, 15, and 16 missions were functional until they were switched off ...

Hollow Moon - Wikipedia

Sources. Moon rocks on Earth come from four sources: those collected by six United States Apollo program crewed lunar landings from 1969 to 1972; those collected by three Soviet uncrewed Luna probes in the 1970s; those collected by the Chinese Lunar Exploration Program's uncrewed probes; and rocks that were ejected naturally from the lunar surface before falling to Earth as lunar meteorites.

Moon rock - Wikipedia

The final Apollo mission to land on the Moon visited the spectacular Taurus-Littrow Valley, deeper than Earth's Grand Canyon. In December 1972, astronauts Cernan and Schmitt (the first professional geologist on the Moon) explored an active fault scarp, a gigantic landslide deposit, and brought back samples including beads of volcanic glass erupted in an ancient lunar fire fountain.

Moon Map for Northern Hemisphere | Resources - Moon: NASA Science

Astronauts from three of NASA's Apollo missions, including Apollo 11, placed special reflectors on the lunar surface that are still used to determine the Moon's distance with extreme precision. In fact, they've revealed that the Moon is moving away from Earth by about 1.5 inches (nearly 4 centimeters) per year.

Apollo and his sister, avoiding the continued anger of Hera, grew up largely removed from Olympus. Both learned to hunt, although Artemis demonstrated exceptional skill with her bow. Apollo built an altar on Delos from the horns and bones of the animals his sister hunted. His grandmother Phoebe gave him the sacred site of Delphi as a birthday gift.
