In fluid dynamics, Couette flow is the flow of a viscous fluid in the space between two surfaces, one of which is moving tangentially relative to the other. The relative motion of the surfaces imposes a shear stress on the fluid and induces flow. Depending on the definition of the term, there may also be

The tumour suppressor protein p53 orchestrates the response to cell damage and - if necessary - induces controlled cell death. It thus plays a central role in preventing cancer and is therefore the most frequently mutated protein in cancer. p53 is tightly regulated by post-translational modifications (PTMs), many of which
