En Resistencia de Materiales, se llama resiliencia de un material a la energía de deformación (por unidad de volumen) que puede ser recuperada de un cuerpo deformado cuando cesa el esfuerzo que causa la deformación. La resiliencia es igual al trabajo externo realizado para deformar un material hasta su límite elástico: = Para una probeta de material elástico lineal sometida a tensión ...

In static Timoshenko beam theory without axial effects, the displacements of the beam are assumed to be given by  $(, ,) = ; (, ,) = ; (, ) = ()$  where  $(, ,)$  are the coordinates of a point in the beam,  $, ,$  are the components of the displacement vector in the three coordinate directions,  $\theta$  is the angle of rotation of the normal to the mid-surface of the beam, and  $w$  is the displacement of the mid-surface in ...
