Arthroscopy, one of the greatest advances in orthopedic surgery in the 20th century, offers a minimally invasive alternative to standard open surgical techniques, which often require extended incisions for adequate joint exposure. Decreased comorbidity, shorter rehabilitation, and the resulting socio-economic benefits are proven advantages.

### **Minimally Invasive Orthopedic Surgery: Arthroscopy**

Minimally Invasive Surgery (MIS) utilizes specially designed tools to work through targeted, smaller skin incisions. This technique essentially allows all of the cutting, shaping, or fixation of surgery to be done from the inside, rather than opening the skin with a larger, traditional incision to completely expose the work area.
